

# PROTECTION RELAYS

# **U-MLEs-PLs-Ts** DC substation protective relay (double voltage line test) 32, 45, 49, 64, 76, 79, 80

D.C. Feeder protection relay with setting parameters programmable locally or via serial communication. Suitable for protection of D.C. feeders with High-Speed DC Breakers, for railway application.

The relay measures the Line current and voltage through one current transducer and one voltage transducer.

The transducers (type MHCO and MHIT) are galvanically insulated.

Via fiber optic and have the following measuring ranges:

- Line voltage : (0 ÷2)Vn
- Line current : (0 ÷10)In
- Insulation voltage 20kVac 1min.

Real time measurements of primary input values can be read continuously both from the display and via ports communication.

Relay settings can be done via the front Touch Pannel (or USB 2.0 port) and via rear serial communication.

The associated Circuit Breaker can be controlled via the frontal keyboard (or USB 2.0 port) and via serial communication.

Settings, events and oscillographic recordings are stored in a non-volatile memory (E<sup>2</sup>PROM).

Besides the normal Watchdog and Powerfail functions, a comprehensive program of self-test and self diagnostic provides:

- Diagnostic and functional test with checking of programroutines and memory contents, running every time the auxiliary power supply is switched on.
- Dynamic functional test running during normal operation.
- Complete Test activated by the keyboard or via the communication bus.

Any internal fault detected is indicated by a fault message on the display and by de-energization of associated I.R.F. output relay.

The relay is available in three different executions:

- Flush mounting.
- Surface mounting.
- 19"Rack mounting.

# **Protective Functions**

- Thermal image protection of the Cable/Line
- 4 Overcurrent levels Forward/ Reverse programmable
- 2 Current Step level with di/dt dependance
- 2 Rate of rise level
- 1 Impedance monitoring level with di/dt dependance
- 1 Current monitoring level with di/dt dependence
- 2 Frame Fault Current and Voltage monitoring levels
- 4 Shot Automatic Reclosure
- 2 Overvoltage levels
- 2 Undervoltage levels
- Automatic programmable Line Test
- Energy counter pulse
- C/B Lock
- Remote Trip

# Control

- Trip circuit supervision
- Associated Circuit Breaker control (OPEN / CLOSE)
- Breaker failure protection
- Breaker interruption energy Σi<sup>2</sup>t

#### Recording

- Two complete setting programs switchable locally or remotely
- Blocking input and Blocking output for pilot wire selectivity coordination and intertripping scheems
- Event Recording (last 100 events)
- Trip Recording (last 10 trips) complete with cause of tripping and values of the input quantities at the moment of trip
- Oscillographic recording of input quantities

# Communications

- Modbus RTU (TCP-IP) and IEC870-5-103 communication protocols
- USB 2.0 on Front Face
- RS485 or RJ45 (optional) communication port on Back Panel
- Synchronisation with other relays (resolution 1ms)
- CanBus line for control of slave I/O Expansion modules

# **Technical Characteristics**

- Graphic Display 4.3" (480x262 dots)
- 10 LEDS for: Power on/internal relay fault, Trip / alarm, Trip circuit fault
- 6 Output relays totally user programmable
- 4 Digital inputs user programmable

#### Mounting

- 2 Module box, totally draw-out execution
- IP44 protection case (on request IP54)
- Totally draw-out execution

#### **Power Supply Ratings**

- Type 1 : 24V(-20%) / 110V(+15%) a.c. - 24V(-20%) / 125V(+20%) d.c.
- Type 2 : 80V(-20%) / 220V(+15%) a.c. - 90V(-20%) / 250V(+20%) d.c.

# Software

MSCom2 Program interface for device management

#### Accessories

- High-Voltage Current/Voltage measuring Transducer with Fiber Optic output : Type MHCO-T/V-I
- High-Voltage Current measuring Transducer with Fiber Optic output : Type MHCO-T-I.
- High-Voltage Voltage measuring Transducer with Fiber Optic output : Type MHCO-T-V
- Voltage measuring reciver with fiber optic input and 3 Analogic outputs : Type MHCO-R-V
- Current measuring reciver with fiber optic input and 3 Analogic outputs: Type MHCO-R-I
- Input/Output Expansion Module: UX10-4 - 10 Digital Inputs + 4 Outputs Relay UX14DI - 14 Digital Inputs UX14DO - 14 Outputs Relay
- Cable monitoring system MSG/N-DIN independent tripping and measurement
- Cable Screen-to-Ground and Conductor-to-Screen monitoring
- Two-channels Digital/Fiber Optic converter for remote intertripping signal Type CFV-BL
- Line Test Contactor
- Line Test Resistor
- Rail Earthing Contactor
- Other protection Relay
- SCADA and Communication systems

Real Time Measurements					
I = Current V = Voltage P = Powe	r +Wh, = Exported Energy	-Wh, = Imported Energy			
F49 (T>): Thermal Image element with preala	rm				
Function enabling	Disable / Enable				
Temperature prealarm	Tal = (10 ÷ 100)%Tn	step 1%Tn			
Continuous admissible current	$ls = (0.5 \div 1.5)$	step 0.01			
Time constant	Kt = (1 ÷ 600)min	step 0.01min
